Justification for decision: (Use continuation sheet if necessary and attach map)

Based on the available information, the Stauffer Road Bridge is eligible for the National Register of Historic Places under Criterion A. The bridge derives its significance from its association with the development of transportation in Frederick County. A pony truss bridge of Pratt design, it was erected in the first quarter of the 20th century, most likely by the York Bridge Company of York, Pennsylvania. Metal truss bridges represent an important step in engineering design and a uniquely American achievement, the result of intensive experimentation in the 19th century. These bridges were the most popular form of bridge construction in Frederick County between the 1870's and 1930's. Large numbers of these relatively easily and cheaply built structures were constructed to span small crossings, greatly facilitating vehicular movement and communication throughout the developing county. The Stauffer Road Bridge is thus an increasingly rare example of the modest sort of structure which was once a common element in the rural landscape. The bridge reflects the development of transportation in the Piedmont Region of Maryland during the State's period of Industrial/Urban dominance as identified in the Maryland Comprehensive State Historic Preservation Plan.

Stauffer's Road Bridge
Walkersville
Public

The Stauffer's Road Bridge is a small pony pratt truss bridge which spans Israel Creek near Walkersville. The single lane bridge is set upon random stone abutments and is approximately thirty feet in length and fifteen feet wide. Joints of the bridge are secured with rivetted connections. No name plate is located on the bridge, but the structure was probably built by the York Bridge Company in early twentieth century.

In 1854, the weekly Frederick Examiner announced that wrought iron was being used as a bridge material and proved to be stronger than the wood truss construction that had been in general use. At that time it was hoped that such an iron bridge would soon be constructed in Frederick County.

It appears from the Frederick County Commissioners Minutes that iron truss bridges became popular in the area during the 1870's. Records show that a variety of companies, including Groton Manufacturing Company, Groton, New York; Wrought Iron Bridge Company, Canton, Ohio; King Iron Bridge Company, Cleveland, Ohio; and the Pittsburgh Bridge Company, Pittsburgh, Pennsylvania, constructed bridges throughout the county. Iron truss bridges were an innovative step toward good bridge engineering design in the nineteenth century and were the pride of every community.
